

## **Analysis of Meghalaya’s Performance in ‘National Multidimensional Poverty Index 2023’**

### **Introduction to the MPI:**

- The global MPI Report is jointly published by the Oxford Poverty and Human Development Initiative (OPHI) and the United Nations Development Programme (UNDP) that measures poverty across three dimensions-health, education, and standard of living of a country.
- The Government of India has acknowledged the significance of the global MPI under the mandate of the Global Indices for Reform and Action (GIRG) initiative. The emphasis of the GIRG initiative is not only to improve the country’s performance and ranking in the global indices but also to leverage the indices as tools for driving systemic reforms and growth. In this context, NITI Aayog, as the nodal agency for MPI, has been responsible for constructing an indigenized index, the National MPI, for monitoring the performance of States and Union Territories in addressing multidimensional poverty.  
The National MPI serves as an important tool that enables the country to track its progress towards the Sustainable Development Goals (SDGs), mainly SDG target 1.2, which aims at reducing “at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions”.
- The ‘National Multidimensional Poverty Index: A Progress Review 2023’ presents the second edition of the national MPI and is a follow-up to the Baseline Report published in November 2021. It provides multidimensional poverty estimates for India’s 36 States and Union Territories and 707 administrative districts across 12 indicators of the national MPI. These estimates have been computed using data from the 5th round of the NFHS (NFHS-5) conducted in 2019-21. This edition also presents the changes in multidimensional poverty between the survey periods of NFHS-4 (2015-16) and NFHS-5 (2019-21). It shows how much multidimensional poverty has changed between states and districts.

### **Indicators**

Like the global MPI, India’s national MPI has three equally weighted dimensions – Health, Education, and Standard of living – which is represented by 12 indicators. The following graphic depicts these.

**Table 1: Indicators in India's National MPI**

Dimension	Indicator	A Household is Considered Deprived If	Weight (W)
Health (1/3)	Nutrition	Any child between the ages of 0 to 59 months, or woman between the ages of 15 to 49 years, or man between the ages of 15 to 54 years -for whom nutritional information is available - is found to be undernourished.	1/6
	Child-Adolescent Mortality	A child/adolescent under 18 years of age has died in the family in the five-year period preceding the survey.	1/12
	Maternal Health	Any woman in the household who has given birth in the 5 years preceding the survey, has not received at least 4 antenatal care visits for the most recent birth or has not received assistance from trained skilled medical personnel during the most recent childbirth.	1/12
Education (1/3)	Years of Schooling	Not even one member of the household aged 10 years or older has completed six years of schooling.	1/6
	School Attendance	Any school-aged child is not attending school up to the age at which he/she would complete class 8.	1/6
Standard of Living (1/3)	Cooking Fuel	A household cooks with dung, agricultural crops, shrubs, wood, charcoal or coal.	1/21
	Sanitation	The household has unimproved or no sanitation facility or it is improved but shared with other households.	1/21
	Drinking Water	The household does not have access to improved drinking water or safe drinking water is at least a 30-minute walk from home (as a round trip).	1/21
	Electricity	The household has no electricity.	1/21
	Housing	The household has inadequate housing: the floor is made of natural materials, or the roof or wall are made of rudimentary materials.	1/21
	Assets	The household does not own more than one of these assets: radio, TV, telephone, computer, animal cart, bicycle, motorbike, or refrigerator, and does not own a car or truck.	1/21
	Bank Account	No household member has a bank account or a post office account.	1/21

### India's performance

The Headcount ratio of India reduced from 24.85% in 2015-16 to 14.96% in 2019-21. 13,54,61,035 number of people were lifted out of poverty.

**India's Headcount Ratio, Intensity and MPI**

Year	Headcount Ratio (H)	Intensity (A)	MPI (HxA)
2019-21	14.96%	44.39%	0.066
2015-16	24.85%	47.14%	0.117

**Multidimensional Poverty in India's Rural and Urban Areas**

Year	Rural			Urban		
	Headcount Ratio	Intensity	MPI	Headcount Ratio	Intensity	MPI
2019-21	19.28%	44.55%	0.086	5.27%	43.10%	0.023
2015-16	32.59%	47.38%	0.154	8.65%	45.27%	0.039

Overview of States and UTs:

Among the North-East states, Meghalaya (27.79%) has the highest share of multidimensionally poor, followed by Assam (19.33%). Meghalaya stands at 3<sup>rd</sup> among 36 states and UTs between the period 2015-16 to 2019-21, with a decline of 4.75 percentage points in the overall improvement in the proportion of multidimensionally poor.

## Meghalaya's Performance:

# MEGHALAYA

A snapshot of multidimensional poverty in Meghalaya

MPI: PROGRESS REVIEW 2023

### Overview

Meghalaya's Headcount Ratio, Intensity and MPI

Year	Headcount Ratio (H)	Intensity (A)	MPI (HxA)
2019-21	27.79%	48.01%	0.133
2015-16	32.54%	48.08%	0.156

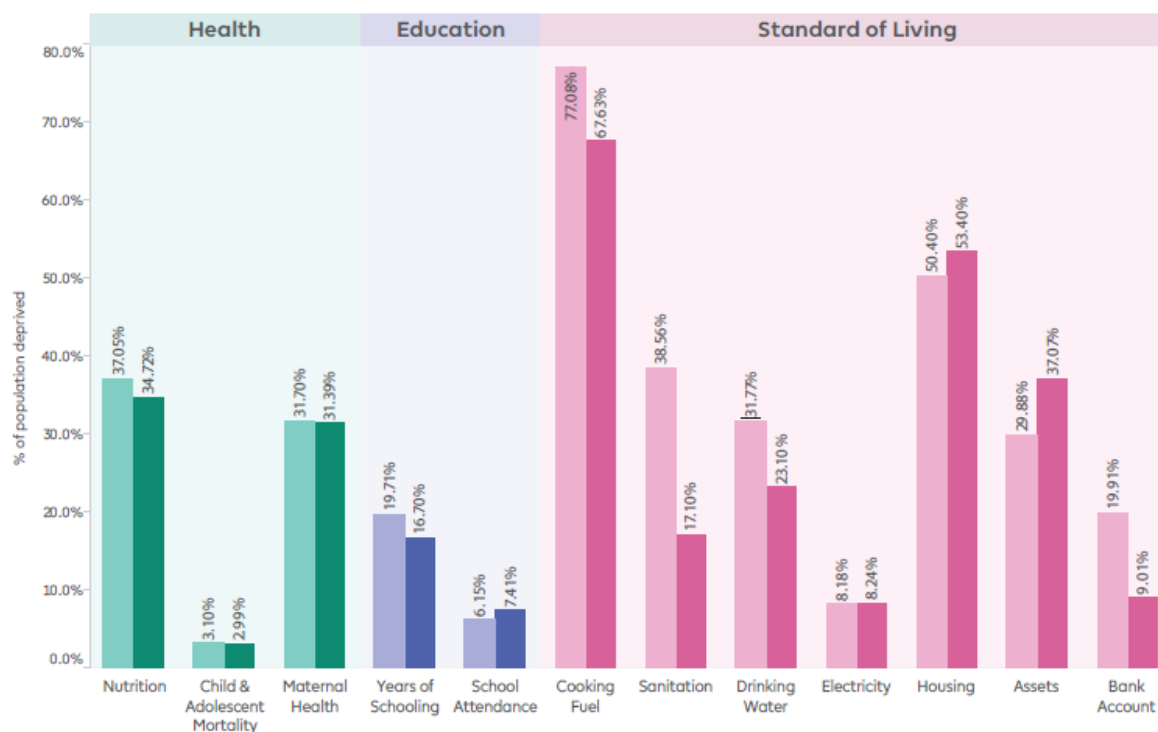

### Multidimensional Poverty in Meghalaya's Rural and Urban Areas

Year	Rural			Urban		
	Headcount Ratio	Intensity	MPI	Headcount Ratio	Intensity	MPI
2019-21	32.43%	48.17%	0.156	8.14%	45.40%	0.037
2015-16	38.49%	48.39%	0.186	8.41%	42.43%	0.036

- Meghalaya has registered a significant decline of 4.75% in multidimensionally poor from 32.54% in 2015-16 to 27.79% in 2019-2021, which is still almost double India's headcount ratio is 14.96% in 2019-21.
- Rural areas saw the fastest decline in headcount ratio compared to urban areas.
- **1,56,738 number of people were lifted out of poverty.**

## Meghalaya: Uncensored Headcount Ratio

Percentage of total population who are deprived in each indicator

## Meghalaya: Censored Headcount Ratio

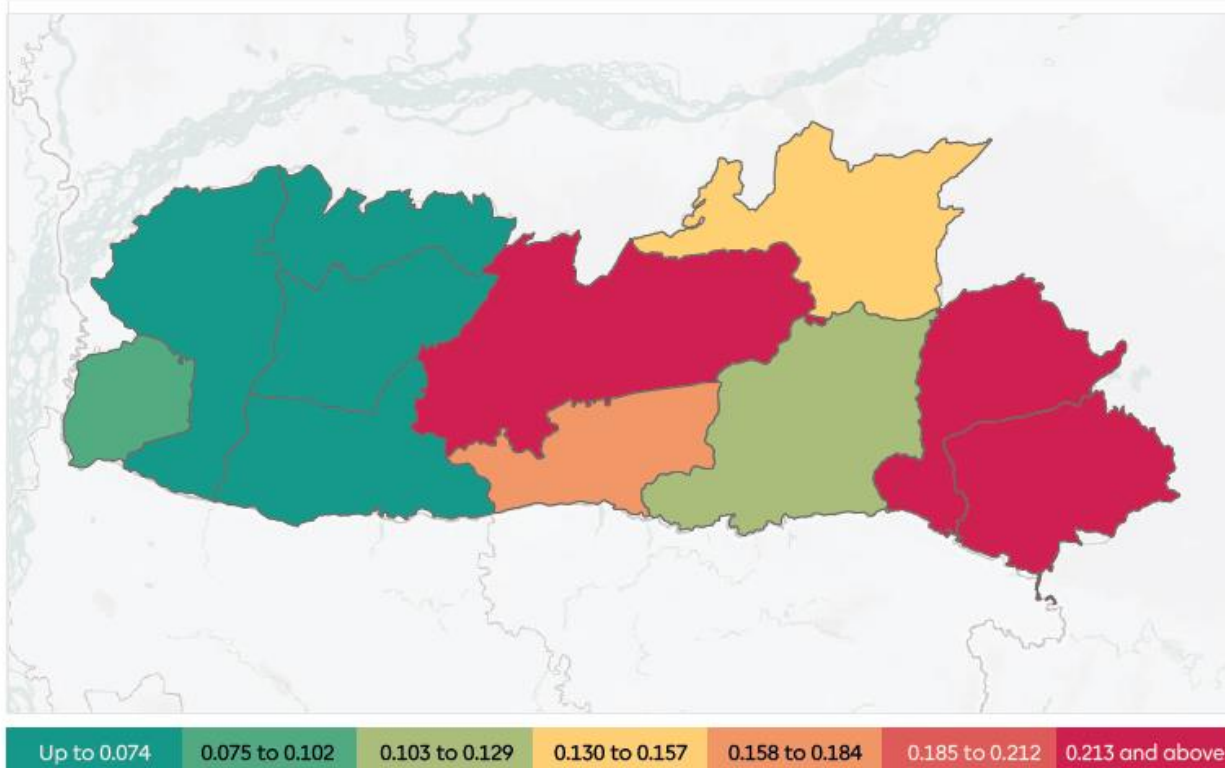

Percentage of total population who are multidimensionally poor and deprived in each indicator

## Meghalaya

Comparative view of the Multidimensional Poverty Index Score (District-wise): NFHS-5(2019-21)

The colour represents the MPI score of a district. The legend provides the range of MPI scores of Meghalaya, based on values for 2015-16. Both the comparative maps use the same legend to represent the change in MPI scores between 2015-16 and 2019-21.

### District-wise Headcount Ratio

*(The Headcount Ratio indicates the percentage of the population who are multidimensionally poor.)*

All districts reported a decline in Headcount Ratio except West Khasi Hills, which has increased.

- West Khasi Hills district recorded the highest HCR in the state, with 52.48% of the population who are multidimensionally poor in the district.
- West Garo Hills district recorded the lowest HCR in the state, with 8% of the population who are multidimensionally poor in the district.
- East Garo Hills recorded the highest decline in HCR in the state, with a reported decline of 26.82% since 2015-16.

## Meghalaya: Headcount Ratio

Percentage of population who are multidimensionally poor in each district

## Way Forward

- To effectively share the MPI findings, organizing a state-level consultation with the support of NITI Aayog and UNDP is recommended. This consultation may include the DCs of districts, senior officials of line departments, and other relevant stakeholders.
- To target outcomes based on data and evidence from the index, State Action Plans should be developed. These plans may focus on domain-specific indicators and highlight implementation and outcome gaps within districts. Progress towards the targets can be achieved by identifying action areas, setting targets for desired results, mapping departmental responsibilities, prioritizing, and articulating specific and measurable actions.
- To ensure existing institutional structures at the state and district level should be strengthened or created as necessary.
