

SAMBODHI

## We are Sambodhi

*We help organizations worldwide make better decisions based on data and evidence.*

We are measurement experts with a flair for innovation and improvisation to meet the rising demand for actionable data. We are knowledge partners and advisors to donors, governments, implementers and public and private-sector organizations across the world.

## Education and Skill

Sambodhi offers a diverse suite of solutions that help our clients understand varying themes that constitute and influence the global education sector.

*We worked with PCI Tanzania to assess a package of interventions implemented in select districts of Tanzania under the McGovern-Dole Food for Education program. The learnings from this study helped augment the program design, implementation pathways and understanding of the local contexts influencing the program.*

## Agriculture, Livelihoods and Natural Resources

Sambodhi has developed tools and robust methodologies to derive insights and solutions while assessing big development programs that strive to ensure environmental sustainability while meeting rising food demand.

*As the evaluation partner of Partnership for Women Empowerment and Rights (PoWER), Sambodhi conducted an impact evaluation to help stakeholders and thematic experts understand different impact areas for this multi-stakeholder intervention which aims to organize and build capacities of women. We looked at the impact on areas such as dietary diversity, food security and income and the role of women in agricultural activities.*

## Energy and Climate Change

Sambodhi believes in co-creating solutions to improve clean energy access and energy efficiency. Our experienced professionals use their extensive sectoral knowledge to analyze risks and vulnerabilities and the underlying variables to better inform policy recommendations.

*Sambodhi conducts periodic monitoring and assessment of The Rockefeller Foundation's biggest energy program in India, Smart Power for Rural Development. Our insights have helped assess the impact of interventions on rural communities in Bihar, Jharkhand and Uttar Pradesh and, also created a roadmap for what could help sustain, grow and scale these gains.*

## Cross-Cutting Areas

Adopting a differential lens helps us achieve a better understanding of different experiences of diverse groups of people, and also of individuals within those groups across differences such as age, ethnic origins or sex.

*The monitoring and evaluation support provided by Sambodhi to the Transforming Rural India Foundation (TRIF) initiative has enabled different thematic experts to share learnings and take informed decisions based on the evidence we provided for improving program implementation.*

## Water Sanitation and Hygiene

Sambodhi is committed to the global efforts towards improving water and sanitation services and hygiene practices by using data and customized analytics to improve WASH initiatives, and its outcomes.

*Sambodhi partnered with the WASH Institute to conduct a rapid assessment study for the Economic Survey of India. We provided empirical evidence to inform policy makers about the disproportionate burden of inadequate sanitation facilities on women and girls. The new learnings can help refine implementation strategies for WASH interventions and also potentially shape future policies to achieve impact at scale.*

## Public Health and Nutrition

Sambodhi's experience, research and thought leadership has been helping businesses and healthcare industry stakeholders understand the effectiveness of their efforts using data-driven evidence.

*The measurement, learning and evaluation support provided by the Sambodhi-led evaluation consortium of Uttar Pradesh Technical Support Unit tests the effectiveness of complex health system interventions in the state. Our evaluation also generates learnings on the implementation quality and critical programmatic insights for course correction, where necessary.*

## Practice Areas

Our young and diverse group of eager innovators and dynamic professionals possess an eclectic mix of experience and expertise that go beyond geographic and functional boundaries.

Our global network of more than 300 professionals and thematic experts work across various development themes, including agriculture, development finance, education, energy and environment, gender empowerment, governance and policy research, information technology, life sciences, livelihoods and public health.
